Subject: Website Go-Live Suggestions and Quotation

Dear Ashish,  
Greetings from Dealin Technologies!

As discussed, regarding the go-live of your website, we would like to propose two possible approaches based on the current condition of the system.

**Option 1: Full Functional Testing + Bug Fixing**

We recommend conducting complete functional testing of the entire website before making it live. This will help us identify all hidden or unknown bugs and ensure smooth, error-free performance post-deployment.

- Scope: End-to-end testing of the website's functionality
- Timeline: Approx. 25 days
- Quote: ₹12,000 (INR) for testing
- Next Step: Post-testing, all identified bugs will be fixed, re-tested again and then the website will be deployed to the live server. Code Fixation cost will vary depending upon actual effort and complexity of the bugs. (Approx ₹1000 INR Per day)

**Option 2: Direct Bug Fixing Based on Your Input**

If you prefer a quicker approach, you may share the known bugs or current issues. We will fix only those without conducting full testing and proceed to make the website live.

- Scope: Fixing only the reported/known bugs
- Timeline: Approx. 15–20 days
- Estimated Quote: ₹15,000–₹20,000 (INR) (Final amount for Code Fixation based on actual effort and complexity)

**Our Recommendation:** While Option 2 offers a faster solution, we highly recommend Option 1 to ensure the website goes live with complete stability and without future risk of failures or missed Functional bugs.

Kindly confirm your preferred approach so we can proceed accordingly.

Looking forward to your response.

Warm regards,  
Samyak Shambharkar
